How Ty-Rocket circle-throw action speeds production

Users nationwide are depending on two-bearing, high-speed Tyler Ty-Rockets for fast—and economical—tonnage processing.

Ty-Rocket's circle-throw action quickly moves coarse material to the top of the bed, out of the way of the fines, allowing near mesh particles to pass through the screen. This fast, accurate sizing of fines means not only faster production but better control of your production.

Users report maintenance virtually nil because of sturdy Ty-Rocket construction.

Available in 2 to 6 feet widths and 4 to 16 feet lengths in single or double screening surface. They may be spring suspended or spring floor mounted. Call your Tyler field engineer or write for *Ty-Rocket Screen Catalog 85.*

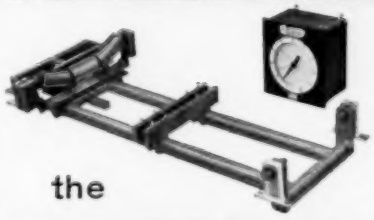
Automatically
weigh • measure • meter • control
the flow of Bulk Materials on Conveyors with



the
RAMSEY
Vey-R-Weigh
Conveyor Scale

There are hundreds of industrial applications for *Vey-R-Weigh*. It is adaptable to any type of conveyor gallery . . . to weigh any type of material carried on a conveyor belt.

Various types of controls can be provided for remote recording . . . tape or punch-card readout, control of feed rates, control of storage systems, blending control and the control of variables which depend on the amount of material being fed on a belt.

Vey-R-Weigh is simple, easy to install . . . ruggedly constructed to take large overloads without injury . . . engineered for maximum accuracy . . . minimum maintenance.

Find out how a RAMSEY *Vey-R-Weigh* CONVEYOR SCALE will fit your particular needs and requirements . . . automate your system . . . reduce your processing costs . . . increase your plant efficiency and production.

Write, wire or phone for complete information or an appointment with a Ramsey representative
